The InkZone system integrates into a variety of digital pre-press workflows. Since most every workflow has unique elements, please take the time to carefully answer the questions that follow. This will ensure that your investment will yield positive results.

1. What type of Local Area Network (LAN) is in use at your printing facility?

- Microsoft
- Novell
- IBM
- Unix / Linux
- Other (please specify) _____

2. What version of LAN software is in use?

Please specify _____

3. Do you have a dedicated IT person?

- Yes
- No

If Yes: name _____

e-mail address _____

4. What brand and version of RIP is used in your workflow (for example: CIP3/4, Creo Overture, Fuji Celebra, Harlequin TIFF, Prinergy, etc.) The more details you can provide about this hardware and software, the easier it will be to understand if the InkZone solution can effectively interpret the digital files.

5. If required, can you modify the naming conventions or folder locations used to identify and store RIPPed digital files?

- Yes
- No

6. Please detail your current output path (folder name(s)) and provide some examples of typical file names:

7. Describe the type or types (make, model, age, width) of presses you wish to develop pre-set data for:

8. As with your presses, please describe the types of press consoles (make, model, age) and the type of media cards or drives that are installed (tape, floppy, magnetic card/strip):

9. Do your presses have perfecting capability?

Yes No

If Yes: what is the number of the first unit printing side #2? _____

What is the maximum number of ink units (per side)? _____

10. Do you currently use the media readers of your press in day-to-day operation and if not can you verify that the readers are in good repair?

Use?

Yes No

Verify good?

Yes No

11. Integrating InkZone requires that you install a dedicated Windows server that will receive copies of your RIPPed image files. This server will be added to your LAN (see diagram on following page). One requirement is that a user account be created on this server with [a] Administration permissions and [b] NO password. Does this requirement pose a problem for your IT manager?

Yes - We cannot allow this. No - There is not a security issue.

12. As a part of this preflight, would you be willing to provide some sample RIPPED files either on compact disk or via FTP transfer?

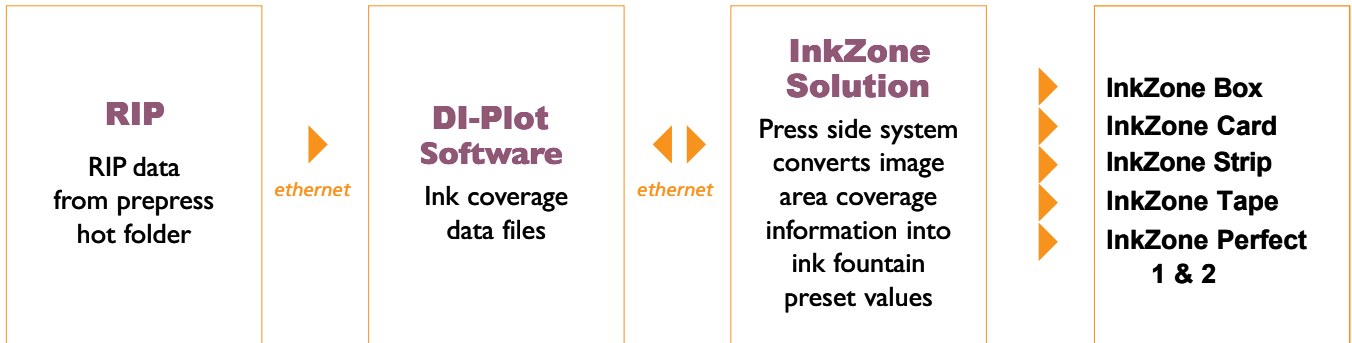

Yes No

Prepress

DI-Plot software generates digitally-accurate ink preset data from most any prepress workflow

Pressroom

InkZone Solutions create press-specific preset data for most brands of printing equipment using familiar job storage media

13. How many unique presses will be supported? _____
14. What is your budgeted hourly press rate (average if more than one press)? _____
15. In how many facilities are the presses located? _____
16. How many jobs do you average on each press per day (across all shifts)? _____
17. What is your average makeready time per job (in minutes)? _____
18. How many sheets of virgin paper are consumed on each makeready? _____
19. What is your average cost for 1000 sheets of paper? _____
20. Please confirm the number of working days per year (typically 50 wks X 5 days = 250 days) _____
